

Imagine

Imagine a Home designed as if the Planet is the Playa - because it came from here.

A Home two people can carry flat-packed, that goes up as fast as a tent.

A Home that's warm at night, cool by day, and withstands snow or windstorms.

A Home that gathers solar, wind, geothermal, and rain, so it needs no grid or fossil fuel and slashes firewood needs to reduce deforestation and tribal conflicts.

A Home that minimizes and recycles every smidgen of biomass, energy, and waste, to improve lifestyle yet leave no trace on the environment.

A Home delivered by a relief agency that starts tiny & bare, then evolves through micro-loans paid for by the user's cooking fuel savings.

A Home that enables the poorest kids to attend school, and parents to work comfortably.

A Home made from sustainable, recycled, and non-strategic materials, so it can proliferate at extreme low-cost without driving commodity inflation or conflict.

A Home that enables 1/3 of humanity to have its dream - without degrading America's dreams, or the planet.

A Home that enables the world's poorest to live more consciously and sustainably than we do, and attacks numerous global problems simultaneously.

A Home being developed by a small team of burning futurists that includes the creators of the Hexayurt and Playatech.

A Home we haven't finished designing yet, and need help to create and deploy.

A Home you may want very much if a major disaster hits your town!

If you have particular expertise or resources that can support this mission, please sign our guestbook, visit Playatech:Black Rock Timeshares at Silicon Village (6:30 & Dart), or email planetsavers@playatech.com.

Thank you for supporting the new dream: everyone achieving the dream of a HOME!

Playatech - Taking the American Dream TO the World, Not FROM It
